

73 + 8 = 81 J. B good... for some.

16 Now  $\frac{545}{600} = 90.8\%$  A-acc

AT THE RIGHT OF THE PAGE, FILL IN THE "o" OF THE BEST ANSWER, FOR EXAMPLE, do.

>IF YOU DON'T KNOW IT, RULE OUT THE OBVIOUSLY WRONG ANSWERS AND THEN GUESS.<

1. Four equations, called \_\_\_\_\_, describe classical electromagnetism. (One version will be the answers to the first four questions on your final. Another version was on a T-shirt I wore to class Friday.)

- a) Maxwell's equations
  - b) Faraday's laws
  - c) Lenz's laws
  - d) Gauss's laws
- a  b  c  d  1.

2. The magnetic flux through a rigid closed loop is constant at 0.008 Wb. At  $t = 6$  s, the integral around that closed loop of the scalar (dot) product of the electric field and the infinitesimal length vector equals \_\_\_\_\_ V.

- a)  $-\frac{0.008}{6}$
  - b) zero
  - c)  $-0.008$
  - d)  $-0.008(6)$
- a  b  c  d  2.

3. \_\_\_\_\_ are induced currents that circulate within the volume of a conducting material.

- a) Lenz's loops
  - b) Maxwell movements
  - c) Ampere's amperages
  - d) Eddy currents
- a  b  c  d  3.

4. The energy density is  $3.3 \text{ J/m}^3$  in a  $0.095 \text{ T}$  magnetic field within a linear ferromagnetic material of permeability  $1.37 \times 10^{-3} \text{ T}\cdot\text{m/A}$ . In this problem,  $3.3 \text{ J/m}^3$  is the value of \_\_\_\_.

- a)  $\mu$  (mu)
  - b)  $U$
  - c)  $B$
  - d)  $u$
- a  b  c  d  4.

5. In problem 4 above,  $1.37 \times 10^{-3} \text{ T}\cdot\text{m/A}$  is the value of \_\_\_\_.

- a)  $\mu$  (mu)
  - b)  $U$
  - c)  $B$
  - d)  $u$
- a  b  c  d  5.

6. A rigid circular conducting loop is at rest in the plane of the paper. If the induced magnetic field at the center of the loop is out of the paper ( $\odot$ ), the induced current in the loop is \_\_\_\_\_.

- a) zero
  - b) clockwise
  - c) into the paper ( $\otimes$ )
  - d) counterclockwise
- a  b  c  d  6.

7. Two coils have a mutual inductance of  $0.0340 \text{ H}$ . The mutually-induced emf in coil 1 is \_\_\_\_\_ V at  $t = 3.45 \text{ s}$ , when the current through coil 1 is constant at  $3.21 \text{ A}$  and the current in coil 2 is decreasing at a rate of  $-5050 \text{ A/s}$ .

- a)  $(0.0340)(5050)(3.45)$
  - b) zero
  - c)  $0.0340 \frac{3.21}{3.45}$
  - d)  $(0.0340)(5050)$
- a  b  c  d  7.

8. Coil 1 has 135 turns and coil 2 has 246 turns. When a constant current of  $3.21 \text{ A}$  flows in coil 1 and no current flows in coil 2, the average magnetic flux from this  $3.21 \text{ A}$  current is  $0.777 \text{ mWb}$  through each turn of coil 1 and  $0.444 \text{ mWb}$  through each turn of coil 2. (Of course, the zero current in coil 2 gives zero magnetic flux through each turn of each coil.) Therefore, the self-inductance of coil 1 is \_\_\_\_\_ mH.

- a) indeterminate
  - b)  $\frac{(135)(0.777)}{3.21}$
  - c)  $\frac{(246)(0.444)}{3.21}$
  - d)  $\frac{(246)(0.777)}{3.21}$
- a  b  c  d  8.

9. In problem 8 above, the self-inductance of coil 2 is \_\_\_\_\_ mH.

- a) indeterminate
  - b)  $\frac{(135)(0.777)}{3.21}$
  - c)  $\frac{(246)(0.444)}{3.21}$
  - d)  $\frac{(246)(0.777)}{3.21}$
- a  b  c  d  9.

10. In problem 8 above, the mutual inductance of the two coils is \_\_\_\_\_ mH.

- a)  $\frac{(135)(0.444)}{3.21}$
  - b)  $\frac{(135)(0.777)}{3.21}$
  - c)  $\frac{(246)(0.444)}{3.21}$
  - d)  $\frac{(246)(0.777)}{3.21}$
- a  b  c  d  10.

11. In problem 8 above,  $\Phi_{B1} =$  \_\_\_\_\_.

- a)  $(\Phi_B)_1$
  - b)  $\Phi_{B2}$
  - c)  $(\Phi_B)_2$
  - d)  $0.777 \text{ mWb}$
- a  b  c  d  11.

12. A magnetic field of  $0.12 \text{ T}$  is in the  $y$ -direction. The velocity of wire segment  $S$  has a magnitude of  $26 \text{ m/s}$  and components of  $6 \text{ m/s}$  in the  $x$ -direction,  $8 \text{ m/s}$  in the  $y$ -direction, and  $24 \text{ m/s}$  in the  $z$ -direction. The length vector of segment  $S$  is in the  $z$ -direction and has a magnitude of  $0.009 \text{ m}$ . Thus, the motional emf induced between the ends of segment  $S$  is ( $\_\_ \times 0.12 \times 0.009$ ) V.

- a) 24
  - b) 8
  - c) 6
  - d) 26
- a  b  c  d  12.

13. In problem 12 above, we are solving for \_\_\_\_.

- a)  $\epsilon$
  - b)  $\mathcal{E}$
  - c)  $E$
  - d)  $\Phi_E$
- a  b  c  d  13.

14. An inductor is a circuit element used mainly for its \_\_\_\_.

- a)  $\Phi_E$                       b)  $R$                       c)  $C$                       d)  $L$                       a○ b○ c○ d○ 14.

15. Through a certain area of a dielectric  $\Phi_E = (8 \text{ V}\cdot\text{m/s}^5)t^5$ . Also,  $i_D = 7 \text{ nA}$  through that area at  $t = 2 \text{ s}$ . In this problem,  $(8 \text{ V}\cdot\text{m/s}^5)t^5$  is the value of the \_\_\_\_\_.

- a) electric flux              b) permittivity              c) displacement current              d) permeability              a○ b○ c○ d○ 15.

16. In problem 15 above,  $7 \text{ nA}$  is the value of the \_\_\_\_\_.

- a) electric flux              b) permittivity              c) displacement current              d) permeability              a○ b○ c○ d○ 16.

17. In problem 15 above,  $\frac{7 \text{ nA}}{(40 \text{ V}\cdot\text{m/s}^5)(2 \text{ s})^4}$  is the value of the \_\_\_\_\_.

- a) electric flux              b) permittivity              c) displacement current              d) permeability              a○ b○ c○ d○ 17.

18. \_\_\_\_\_ law says the direction of any magnetic induction effect is such as to oppose the cause of the effect.

- a) Lenz's                      b) Ampere's                      c) Cole's                      d) Henry's                      a○ b○ c○ d○ 18.

19. The magnetic potential energy stored in the magnetic field of a  $8 \text{ mH}$  coil when the coil carries a constant current of  $5 \text{ A}$  is \_\_\_\_\_ mJ.

- a)  $\frac{1}{2}(8)(5)^2$               b)  $\sqrt{\frac{(2)(8)}{5}}$               c)  $-(8)\frac{d(5)}{dt} = 0$               d)  $\sqrt{\frac{(2)(5)}{8}}$               a○ b○ c○ d○ 19.

20. In copper (a diamagnetic material) at room temperature,  $\mu$  is \_\_\_\_\_  $\mu_0$ .

- a) slightly greater than                      c) exactly equal to  
 b) slightly less than                      d) zero times                      a○ b○ c○ d○ 20.

21. Seven seconds after starting to change the average magnetic flux through each turn of a  $26$  turn coil at a constant rate of \_\_\_\_\_ microwebers per second, the induced emf across the coil is  $-140$  microvolts.

- a)  $(140)(26)$               b)  $(140)(26)(7)$               c)  $\frac{140}{26}$               d)  $\frac{(140)(26)}{7}$               a○ b○ c○ d○ 21.

22. A rigid circular conducting loop is at rest in the plane of the paper. An *external* magnetic field through the loop is out of the paper ( $\odot$ ) and is *constant*. Therefore, the *induced* magnetic field is

- a) out of the paper ( $\odot$ )              b) zero              c) counterclockwise              d) into the paper ( $\otimes$ )              a○ b○ c○ d○ 22.

23. On the other hand, if the *external* magnetic field through the loop is out of the paper ( $\odot$ ) and is *decreasing*, the *induced* magnetic field is

- a) out of the paper ( $\odot$ )              b) zero              c) counterclockwise              d) into the paper ( $\otimes$ )              a○ b○ c○ d○ 23.

24. A current decreasing at a rate of  $-380 \text{ A/s}$  induces an emf of  $62 \text{ mV}$  in a coil of self-inductance \_\_\_\_\_ mH.

- a)  $\frac{380}{62}$                       b)  $\frac{62}{380}$                       c)  $\frac{2(62)}{(380)^2}$                       d)  $(380)(62)$                       a○ b○ c○ d○ 24.

25. The energy density of a  $0.15 \text{ T}$  magnetic field in vacuum is  $9.0 \text{ kJ/m}^3$ . If the magnetic field magnitude is tripled to  $0.45 \text{ T}$ , the energy density in vacuum will be \_\_\_\_\_  $\text{kJ/m}^3$ .

- a)  $3 \times 9.0 = 27$               b)  $\frac{9.0}{3} = 3.0$               c)  $\frac{9.0}{3^2} = 1.0$               d)  $3^2 \times 9.0 = 81$               a○ b○ c○ d○ 25.

26. In class yesterday, we used  $I = i$  to show the magnetic potential energy of an inductor equals \_\_\_\_\_.

- a)  $\frac{u}{\text{volume}}$                       b)  $\frac{B^2}{2\mu}$                       c)  $\frac{1}{2}N\Phi_B i$                       d)  $-\frac{N\Phi_B di}{i dt}$                       a○ b○ c○ d○ 26.
